

# Troubleshooting Spinnaker

**Shubhasish Panda**

Infra & Platform Engineer

@linkedin | [www.linkedin.com/in/subhasishpanda](https://www.linkedin.com/in/subhasishpanda)

# Overview

**Discuss general troubleshooting steps**

**Setup a logging platform**

- Configure log levels
- Collect audit logs

**Setup a monitoring platform**

- Install Prometheus & Grafana
- Expose application metrics
- Configure alerts

**Able to troubleshoot Spinnaker**

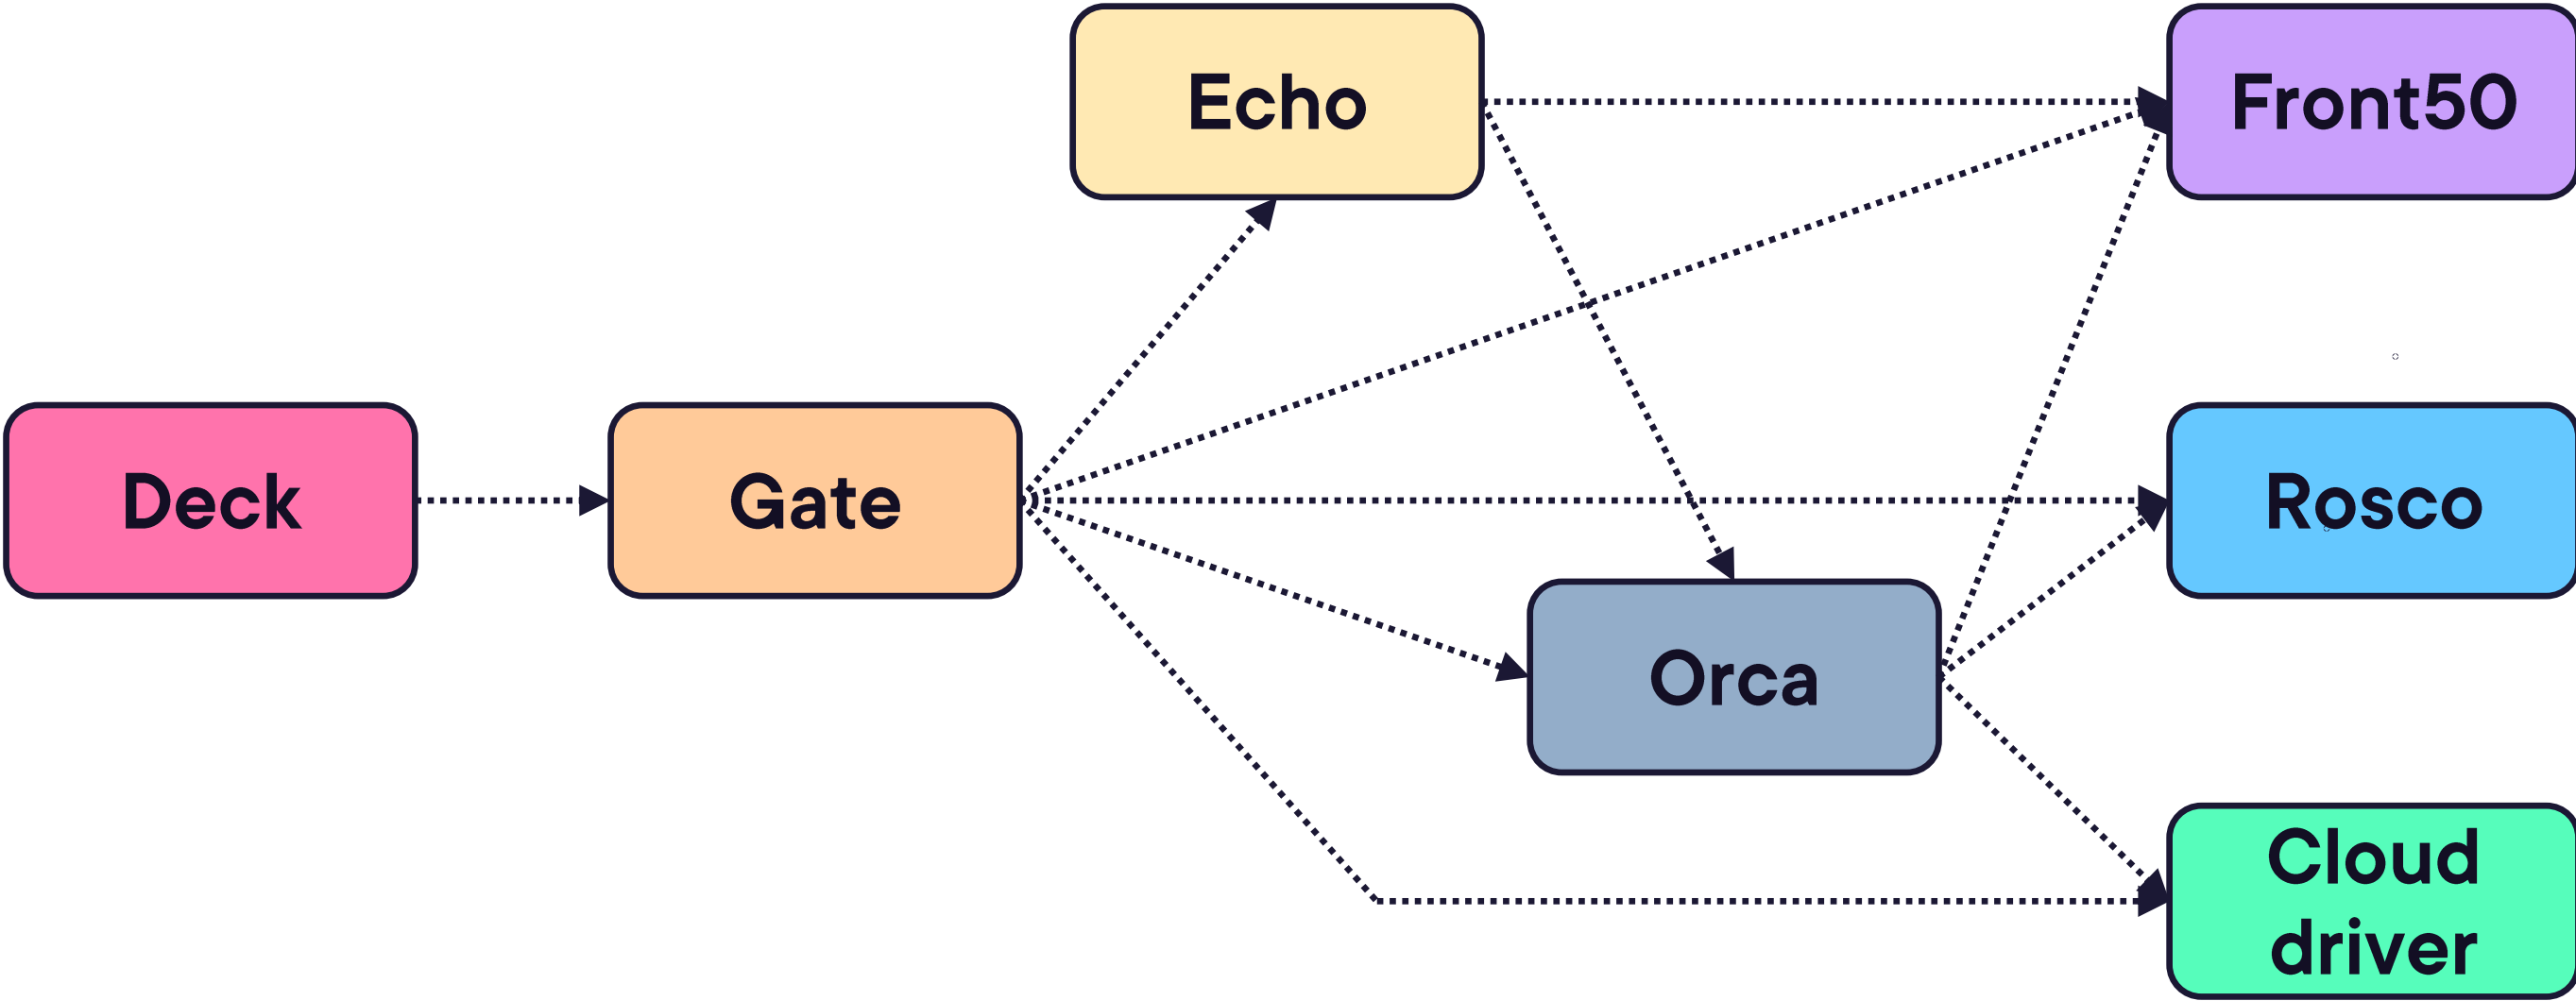

# General Troubleshooting

# Spinnaker Microservices

# Steps to Troubleshoot

**Check the browser's  
developer console**

**Find out the failing  
API and map it**

**Check the  
application logs**

Port Number	Microservice
Deck	9000
Clouddriver	7002
Echo	8089
Front50	8080
Gate	8084
Igor	8088
Orca	8083
Rosco	8087
Rush	8085

## Containers

## Logging

*push*

## Dashboards

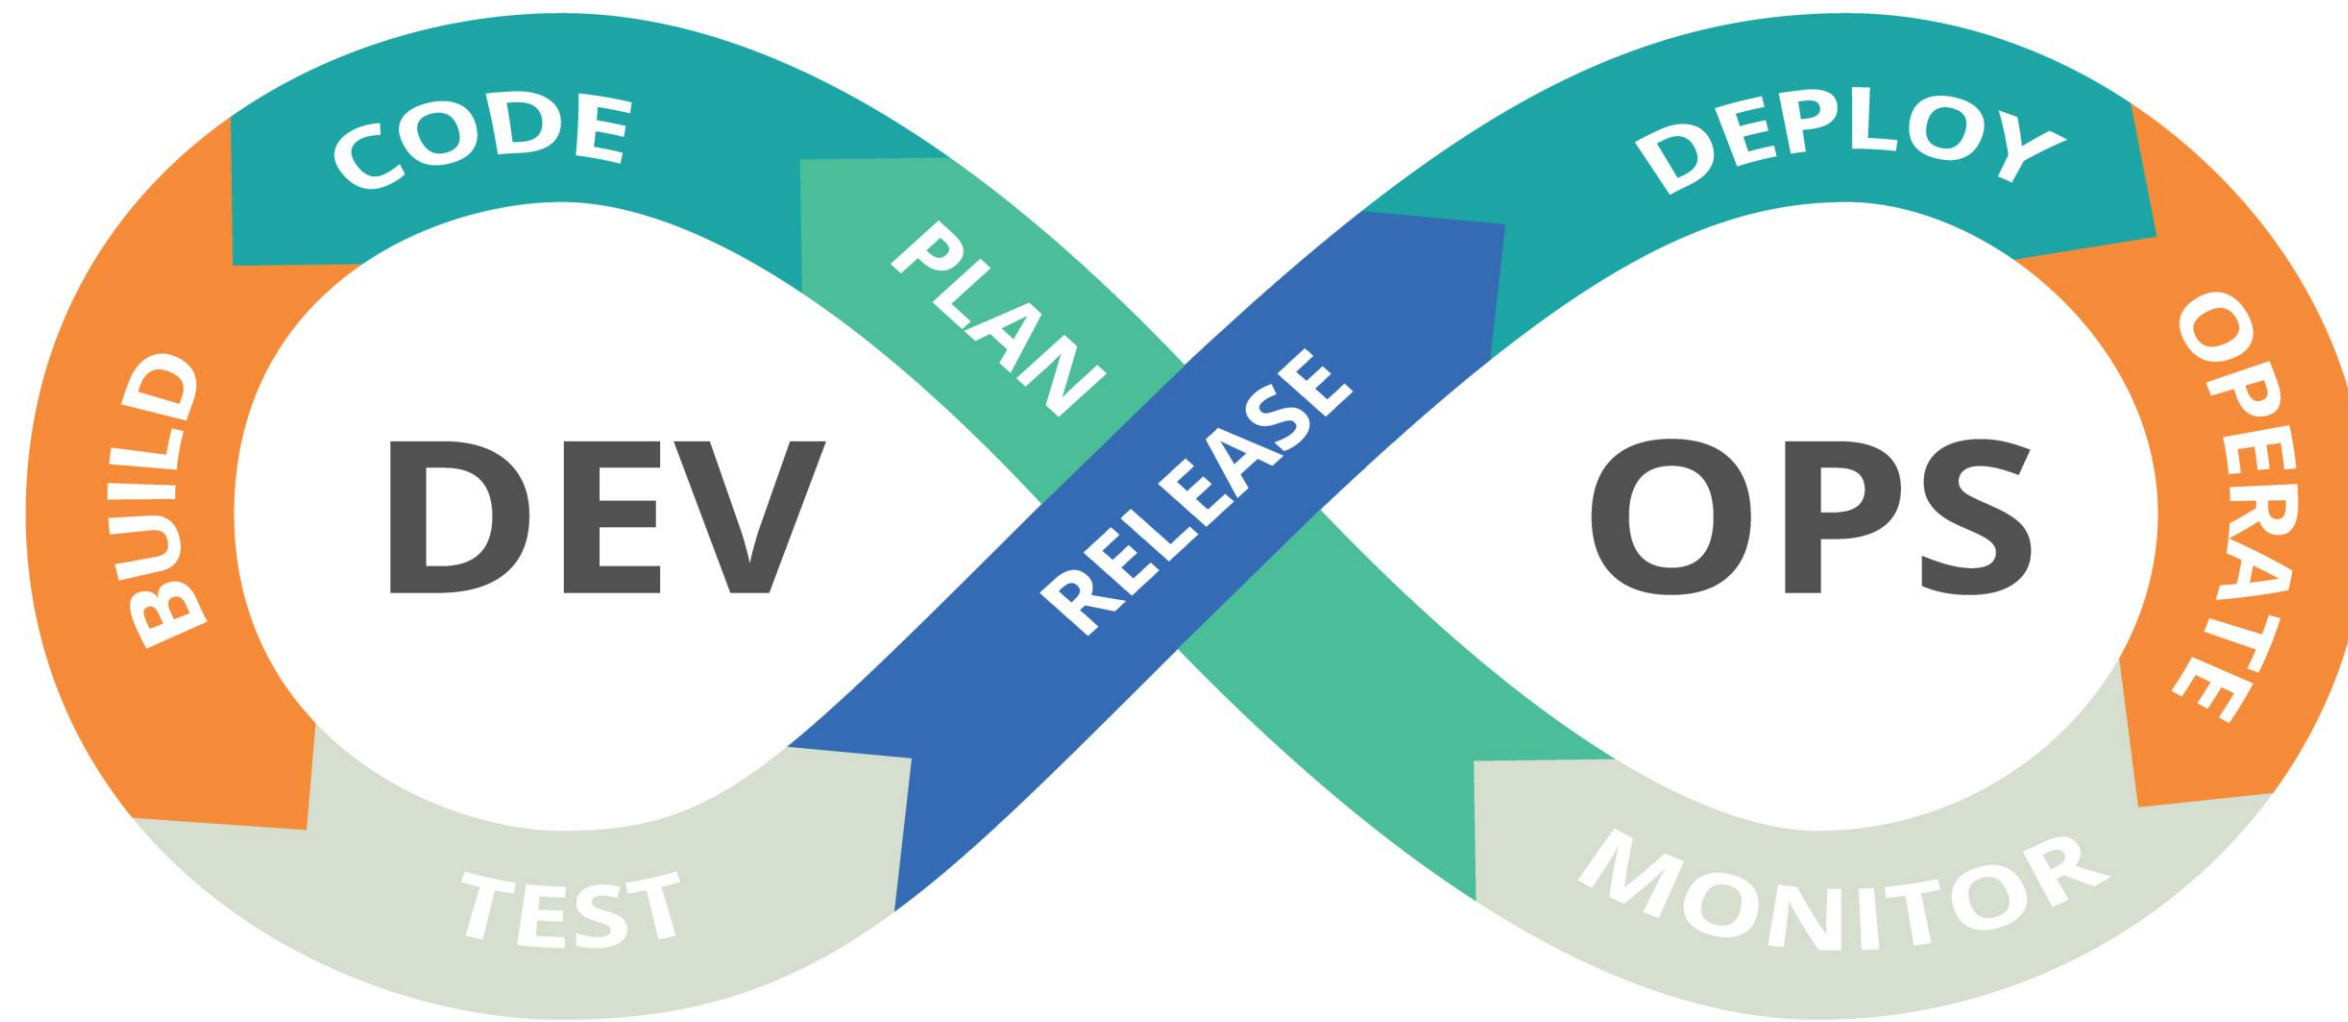

*debug*

**Dev team**

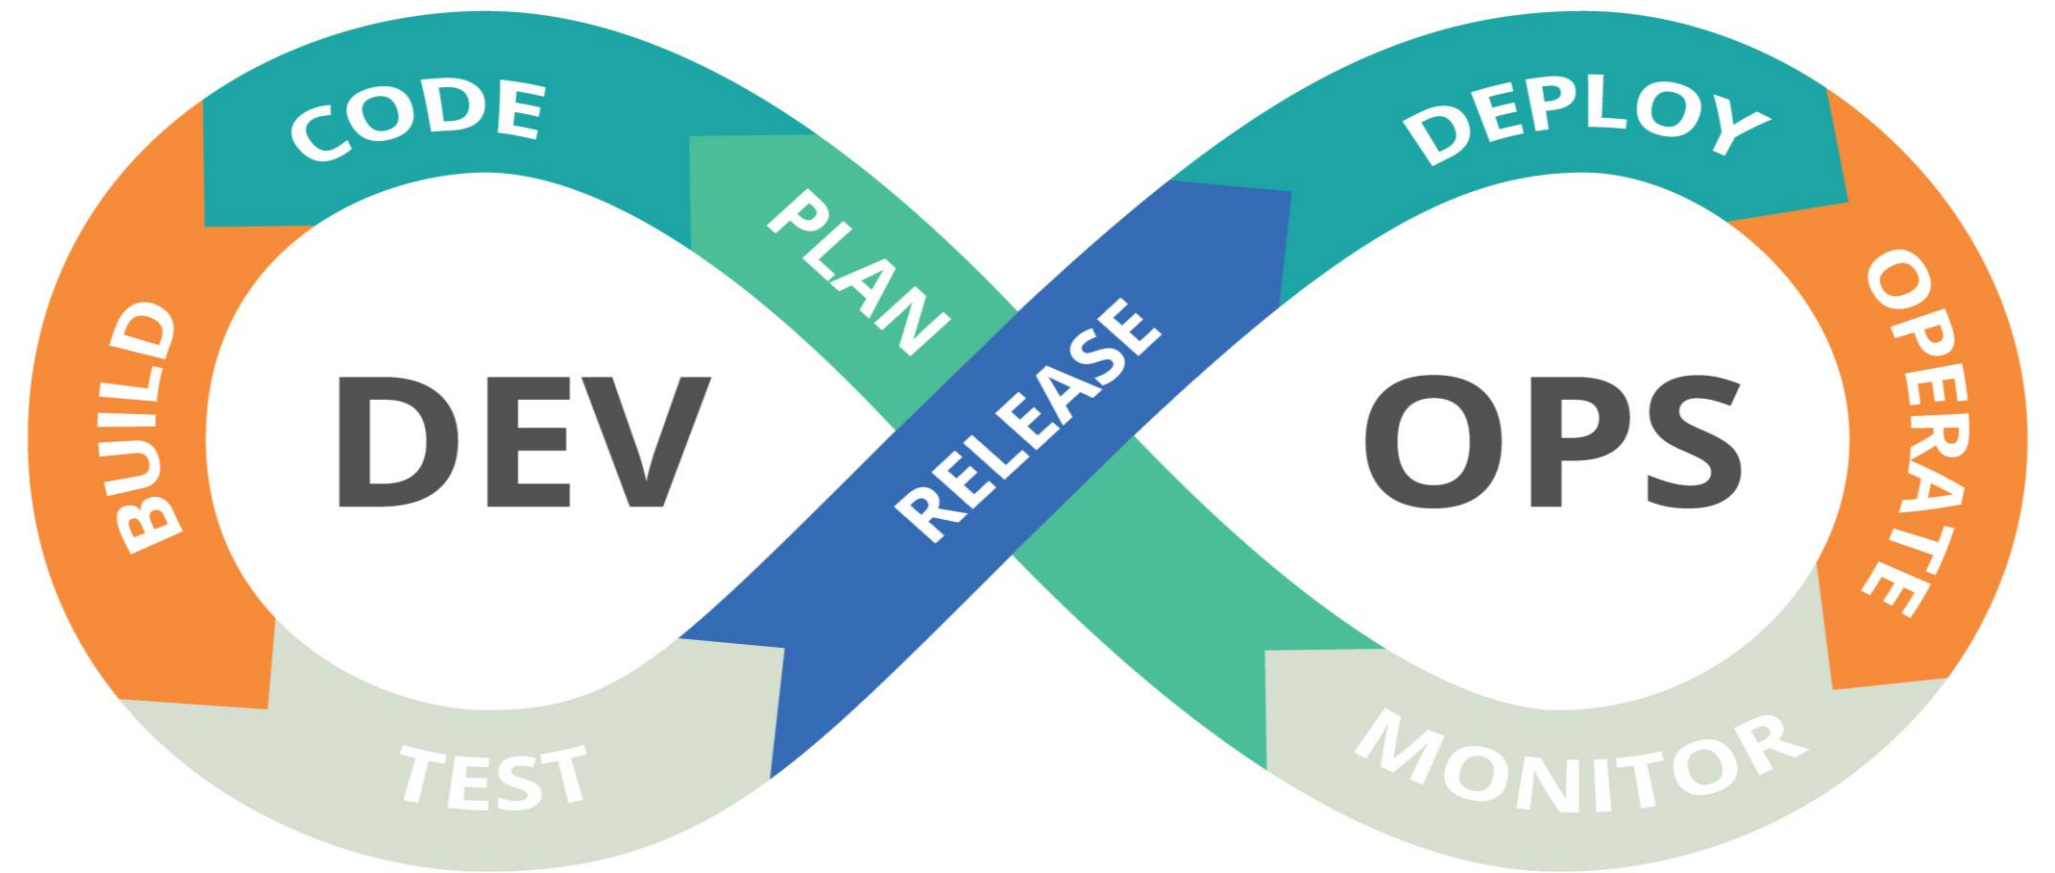

**Essential for operating  
software in production**

# Logging

## Application Logging

Is a process of collecting general, events, & audit logs

Is critical in running application production.

# Application Logging

Is a process of collecting general, events, & audit logs

Is critical in running application production

## Developers

*Event logs*

**Debug their code**

## System admins

*Audit logs*

**Detect malicious attacks**

# Log Management Steps

**Setting up logging tool**

**Enabling application logs**

**Collecting logs centrally**

**Securing & scaling log platform**

## Object storage

Store

Grafana loki

## Loki

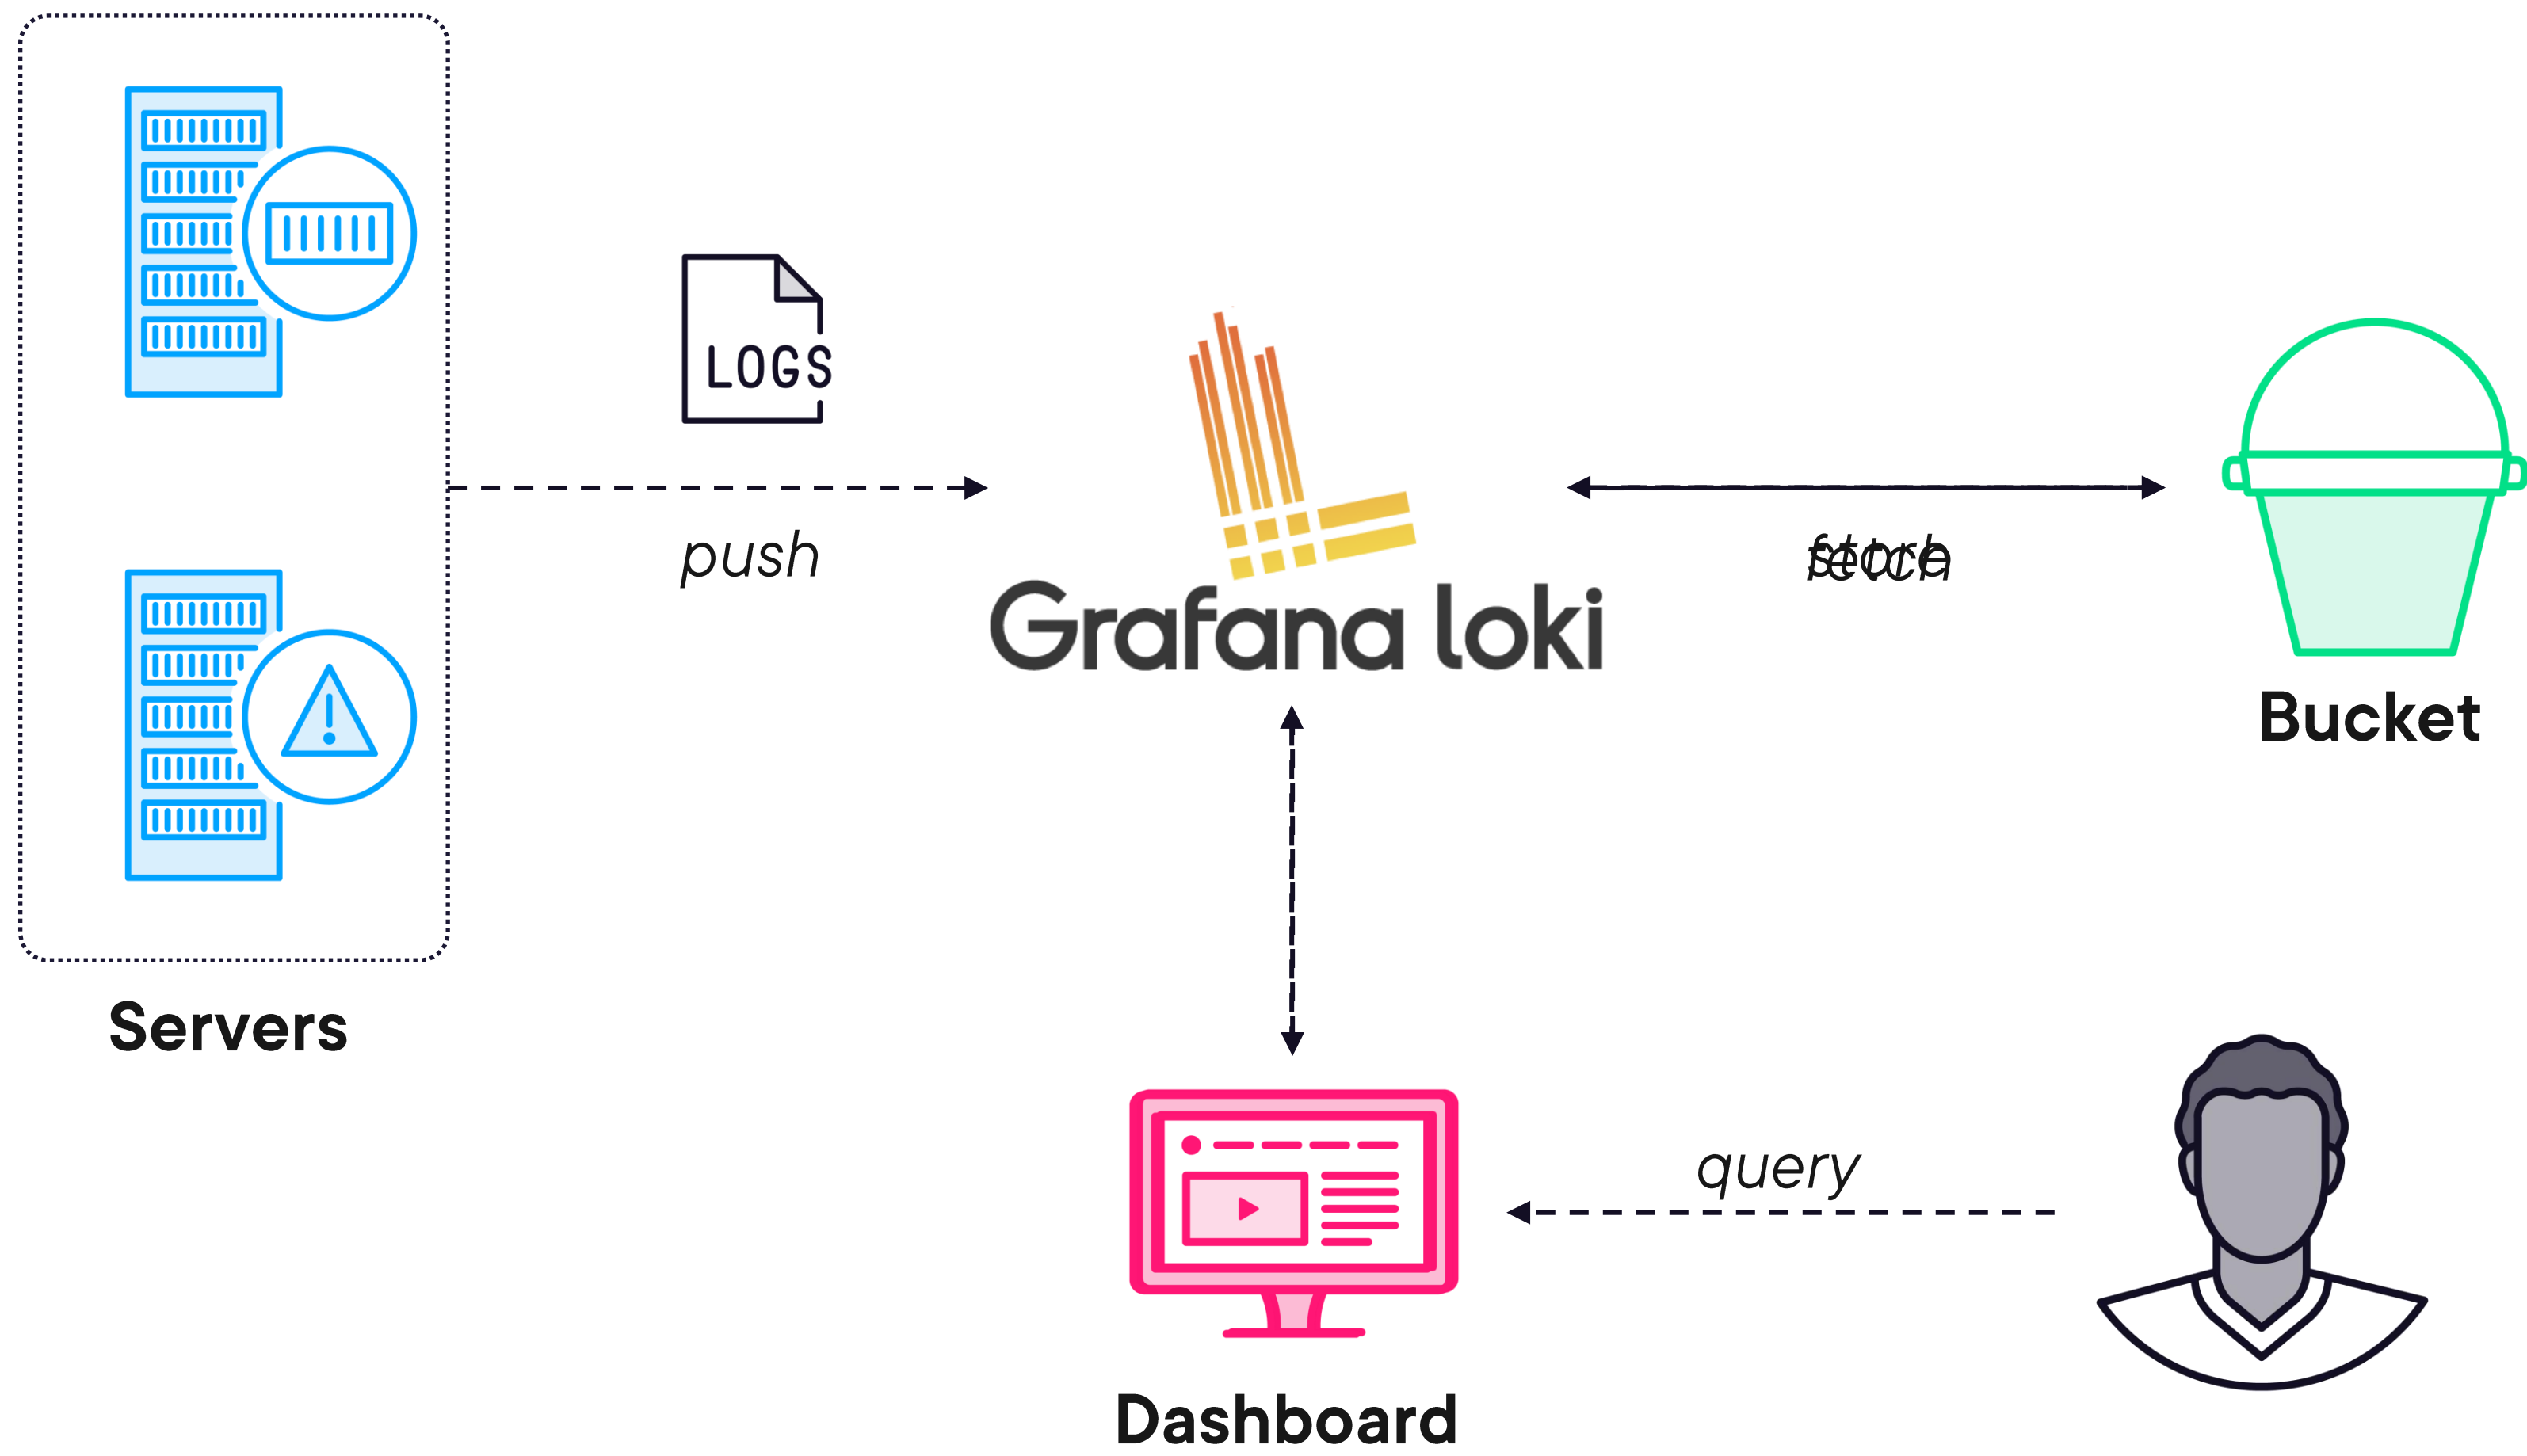

Cost effective

Scalable

K8s pod

  
Grafana loki

```
apiVersion: apps/v1
kind: Deployment
metadata:
  name: spin-deck
  namespace: spinnaker
  labels:
    app: spin
    cluster: spin-deck
```

app

namespace

cluster

# Demo

## Install & configure Loki

- Use *AWS s3*

Not recommended

## Log Level

Grafana loki

## Increased

Complexity

Cost

## Log Level

  
**DEBUG**

  
**INFO**

  
**ERROR**

  
**WARN**

*push*

# Demo

**Change the log level of gate & echo service**

# Advanced Logging Settings

## Enables:

- JSON formatting
- Log level per java class
- Log keys filter
- Use “logback.xml” file

# Demo

**Enable & push audit logs**

# Monitoring

# Application Monitoring

Process of collecting performance, availability,  
& usage data and using that data to improve  
customer's experience

# Why Monitor?

**To observe  
performance &  
health**

**To take data  
driven decision**

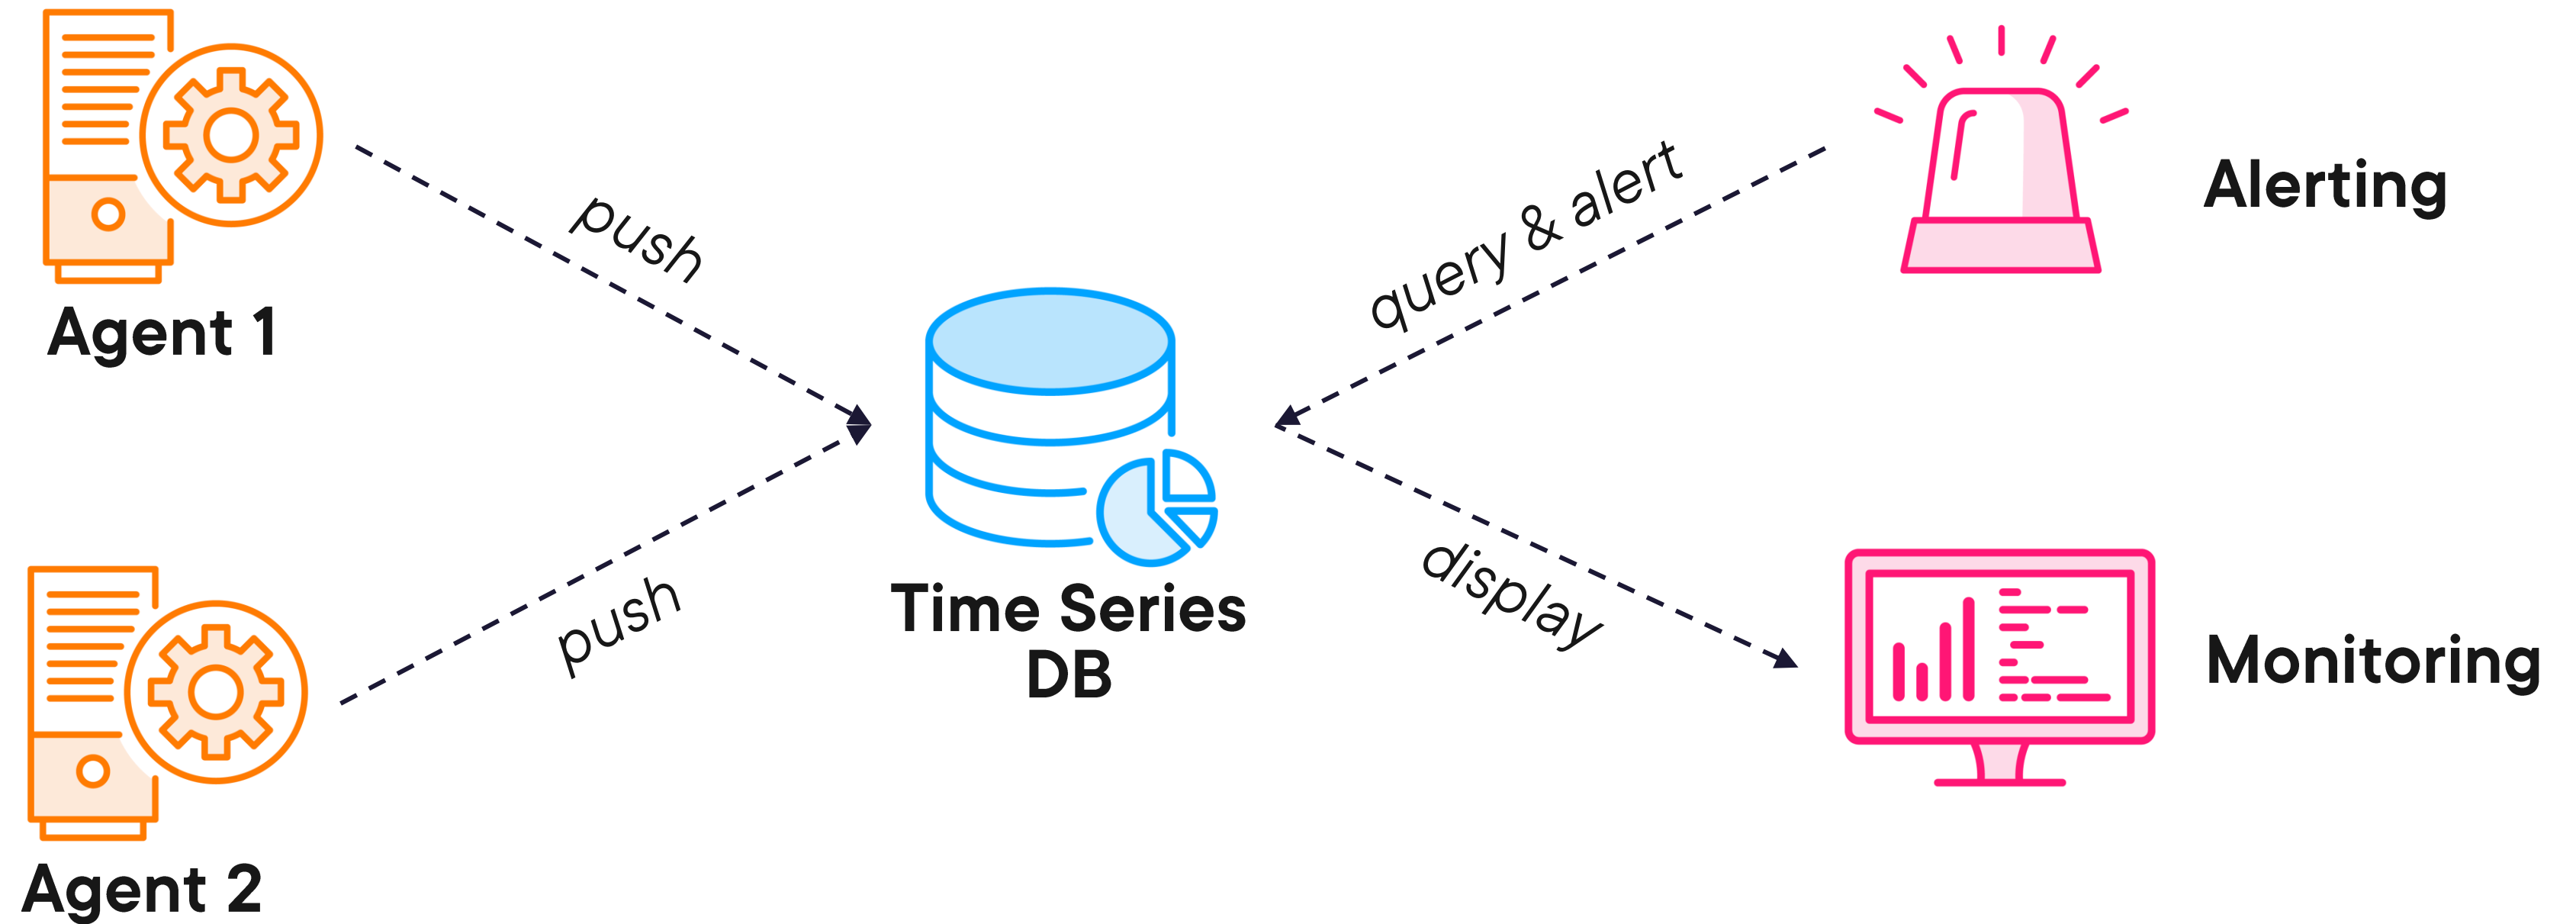

**To detect  
anomaly  
beforehand**

**To troubleshoot  
an incident  
faster**

# Monitoring System

**Demo**

**Install prom-stack**

**Demo**

**Add Spinnaker's infra & application metrics  
dashboard to Grafana**

# Application Metrics

**Spinnaker**

*query*

**Service  
Monitor**

*push*

**Prometheus**

**Demo**

**Configure alerts**

# Alerting System

**Grafana  
Dashboard**

**Threshold**

**Alert**

# Summary

**Explore other monitoring & logging tools**

**Skills to troubleshoot Spinnaker**

**Setup logging & monitoring platform**

**Setup alerts**
